## (54) COATING COMPOSITION AND COATED ARTICLE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a coating composition capable of obtaining a coating film having a reflected light density and hue which change depending on the angle of sight, and having a color tone of characteristic appearance of depth, deep feeling and profound feeling.

SOLUTION: The paint composition contains (A) a resin component, (B) a curing agent component, (C) a light interfering pigment and (D) a delustering agent. The light interfering pigment and the delustering agent are contained in such a manner that the gloss value of a 60-degree grain of the coating film obtained by applying the coating composition becomes  $\leq 30$ .

## LEGAL STATUS

[Date of request for examination]

05.04.2004

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
